

The Isra-Bluff

By Josh G

I'm back for a few brief comments on the recent spat between Hamas and Israel. The picture above allegedly shows rockets fired from Gaza on the right and the Iron Dome anti-missile system on the left. I won't bother to pick apart some oddities in the picture, since I can show you that the Iron Dome is a bluff, or to be more precise, an Isra-bluff. An Israeli [comedy troupe](#) coined the term "Isra-bluff" decades ago and it is frequently used by Israelis to describe situations where the Israeli government "[tries to pull a fast one over on everybody.](#)"

The Iron Dome is a quintessential Isra-bluff. It's basically just a big fireworks show. At \$50,000 per missile and \$50 million per launcher, it's another fancy but useless doodad that justifies the ongoing pilfering of the treasury. Doubts about the effectiveness of the system were raised from the beginning, with reports issued in 2013 and 2014 not by a bunch of conspiracy theorists, but by the likes of [Theodore Postol](#), a professor Emeritus in Science, Technology, and International Security at MIT, Mordechai Shefer who was awarded the prestigious Israel Defense Prize in 1978, and Richard Lloyd a former missile designer at Raytheon.

I'm not going to delve into the ins-and-outs of their explanations about why it's a bluff. You can read more [here](#) and [here](#) about problems with the Iron Dome. Suffice it to say that the army greatly exaggerates the number of rockets launched by Hamas as well as the accuracy and effectiveness of the missiles as well. Every (or almost every) time it detonates in the sky is just self-destruction, and even if it did "hit" an incoming missile it would not be able to knock it down. The Israeli army has been asked to supply evidence that the rockets work in the form of infrared imaging of actual rockets being intercepted, but have failed to supply any. "Trust us! Would we lie to you?" is their response.

Mordechai (Moti) Shefer has been very vocal about the lies and deceptions of the latest kerfuffle on [his Fakebook page](#). It should be noted that he has been trying to develop an anti-missile system he says would actually be effective, but has been stymied at every turn. Even though he himself is probably bluffing, this admission is very telling, because one would think that the defense industry would be interested in turning the best ideas into the most effective weapons. Instead, [as this interview with him shows us](#), the last thing they want is an effective anti-missile system. All anti-missile systems, including Reagan's unbelievably expensive SDI scam that never materialized, are just ways for these companies and their investors to milk the treasury. If they were really effective, then it would sort of neutralize the fear of the enemy, wouldn't it? Can't have that.

But of course the biggest bluff of the past few weeks is Hamas as the stubborn enemy of Israel. It is openly admitted that the Mossad was instrumental in creating Hamas, as in [this article](#) from *The Intercept*:

But did you also know that Hamas — which is an Arabic acronym for “Islamic Resistance Movement” — would probably not exist today were it not for the Jewish state? That the Israelis helped turn a bunch of fringe Palestinian Islamists in the late 1970s into one of the world's most notorious militant groups? That Hamas is blowback?

This isn't a conspiracy theory. Listen to former Israeli officials such as Brig. Gen. Yitzhak Segev, who was the Israeli military governor in Gaza in the early 1980s. Segev later told a New York Times reporter that he had helped finance the Palestinian Islamist movement as a “counterweight” to the secularists and leftists of the Palestine Liberation Organization and the Fatah party, led by Yasser Arafat (who himself referred to Hamas as “a creature of Israel.”)

“The Israeli government gave me a budget,” the retired brigadier general confessed, “and the military government gives to the mosques.”

“Hamas, to my great regret, is Israel's creation,” Avner Cohen, a former Israeli religious affairs official who worked in Gaza for more than two decades, told the Wall Street Journal in 2009.

Of course, as with all public admissions about Western Intelligence creating monsters that turned around and attacked them—like with their active support of the likes of Saddam Hussein, Osama bin Laden, the Iranian Pahlavi Shahs, or Mao Zedong—these accounts always misdirect into “blowback.” These intelligence agencies must not be very intelligent if they keep making the same mistake over and over. “Oops! Egg on our face. Sorry, folks. Won't happen again.” But we know better. None of these former intelligence assets ever went rogue. They were always acting under orders.

And who is credited as the founder of Hamas? That would be Sheikh Ahmed Yassin. Let's see...anything suspicious about this character?

Nope, nothing to see here folks. Move on.

According to [Wikipedia](#), “Yassin was killed in an Israeli attack on 22 March 2004... Yassin always used the same direction every morning to go to the same mosque in the Sabra district that is 100 m (330 ft) from his home.” Of course they just added that detail so they could sneak in a 33. And of course 3/22 you should immediately recognize as a spook date associated with Yale’s Skull and Bones.

[Sheikh Hassan Yousef](#) is credited as co-founder of Hamas. Only thing is that his eldest son, Mossad oops I mean Mossab, was apparently [an Israeli spy](#) and even wrote a book about it, [Son of Hamas](#). And just a couple of years ago [another son of his](#) abandoned Hamas and went on to expose the lifestyles of the rich and famous that its leadership led. I guess their dad could have used some parenting lessons or better indoctrination methods. Or maybe...just maybe...he works for Israel, too? Nah, couldn’t be.

A couple of years ago I probably would have read through *Son of Hamas* to point out the absurdities and lies. But now it just seems like overkill. I invite you to fill in the blanks.

And by the way, the rockets from Hamas don’t seem to have any explosives in them, at least ones that have landed and been found. And it was awfully gentlemanly of Hamas to notify Israelis living in Tel Aviv the approximate time they were going to be firing missiles at them (yes, it’s true).

Let me be clear, though, the bluff is not apparent to the vast majority of the population, which believes in the Iron Dome but knows it isn’t perfect so is also scared of the incoming missiles as they huddle in bomb shelters.

Another big bluff of this whole charade has been the destruction of several large buildings in Gaza. Videos show very clear signs of planned demolition.

[Here for example](#) is a video of the collapse of the Al-Jalaa Tower that housed press offices such as Al Jazeera and the AP, and allegedly some Hamas intelligence offices.

[A reader on CTFE](#) made the following observations:

In this video I can observe the following sequence of ‘events’:

First two almost simultaneous explosions are a consequence of two projectiles hitting at minute 12:27. The building leans just slightly away from the camera. The ground shakes the camera for quite a long time and then there is additional shaking by the air blast-wave. Also the cameraman moves the camera to capture the smoke plumes created by the projectiles.

There is an intermission between the first two external (almost simultaneous projectile explosions at 12:27) and the third projectile explosion about three minutes later (at 15:39). In this three minute ‘intermission’ period there are two small ‘preparatory’ (low yield, multiple points) internal upper-floors explosions – at 14:07 and at 14:27 without any visible smoke in or around the building and lacking any air blast wave hitting the camera, but indicated by the two very short/sharp and violent ground shakes to the camera which both times loses focus and electronically glitches temporarily – that ‘softened’ the building’s main internal support walls higher up in the building, before the already mentioned third projectile hit at 15:39 (possibly with the delayed action explosion) again shaking the ground for a long time and also air wave hitting the camera violently. The building lists considerably, but not critically.

Then the final two big internal baseline demolition charge explosions happen (at 17:13) and the building sags and ‘walks’ into the ground where it was supposed to. Again violently shaking the camera through the ground and air waves. It is all over and done in less than five minutes.

I think there would be at least 10 more projectile hits that size needed from all sides in order to bring the building down by ‘bombing’ means only. And even then the building would remain in one toppled-over peace. I think the charge demolition blasts (provided by Hamas) were used to get the job done and three projectiles (contributed by Israel’s air force) were used for psychological superiority marketing. So much for the Hamas being Israel’s creation going rogue.

This video is smoking-gun proof that Hamas is in Israel's pocket, since they would have had to be the ones responsible for wiring the building for demolition. I rather think the missile strikes (assume they weren't just special effects added in for plausibility) were meant to fill the area with dark smoke so the demolition charges could be set off without anybody seeing.

The same tactic can be seen in these videos of two other high rise building in Gaza collapsing in similar fashion:

May 11: [The Hanadi Tower](#). (Even the commenters can see it's a planned demolition)

May 12: [The Al-Shorouk Tower](#).

Here was a third tower that [looks similar with all the black smoke](#) but [remained standing after the "bombing."](#) How were the Israeli missiles able to work such magic in the other 3 cases but here the building hardly even seems to have a dent? Even the big screen TV on the outside of the building seems to have escaped unscathed.

And for those of you saying, "well those couldn't have been a planned demolition because the buildings don't fall straight down into their own footprint," I have two answers: 1) That "telescoping" demolition method is hard to achieve and generally reserved for demolitions where there is a danger of damaging surrounding structures; the "tipping" method is more common. [Here](#) is an example of a planned demolition that looks a lot like what we saw in these videos. And 2) what are the chances that a few missiles, no matter how accurate or powerful, could have brought down 3 high rise buildings so smoothly and that they all just happened to lean over in the right direction to avoid damaging the surrounding building? The answer: Not a chance.

Why would Hamas leaders go along with this? So they could make money rebuilding the destroyed buildings once all the hundreds of millions of dollars of aid starts to pour in again. Money in the bank. I doubt anyone would be willing to insure a building in Gaza, but if so insurance fraud could be another angle. I assume there are more angles that we don't know about. And it's definitely a PR coup for Israel's military might and sophistication.

On another note, the past two weeks have seen a steep rise in tensions between Jewish and Arab Israelis that resembles the wave of Black Lives Matter protests and riots that swept the US following the (fake) George Floyd killing. It has felt at times as though the country was on the verge of a civil war. Just as all that tension in the US was manufactured, we may assume the same is true here. One clue to this is the presence of paramilitary goons at some of the flash points wearing unofficial insignias like this:

The punisher symbol is a clue here that the P-Navy is behind this, since the same symbol has become popular among “militant right wing” and “blue lives matter” groups in the US (including the January 6th Capitol building rioters who Miles [has ousted](#) as spooks). See [here](#) and [here](#) for more. That last link says the Punisher icon has roots in a symbol used by [the NAZI SS](#). So all of this indicates spook-led mass hysteria both in the US and Israel.

One big difference between the unrest in the two countries is that the spark that set everything on fire in Israel in recent weeks was the eviction or threatened eviction of several families from a building in an Arab neighborhood in East Jerusalem. Unlike the George Floyd killing, it can at least be said that the evictions that have occurred in that neighborhood are real. I know because I’ve been there. The Palestinian people have been treated horribly by the Israeli government. I sympathize with their anger and denounce their inhumane treatment. The people in Gaza have suffered horribly and unnecessarily. Though both Israelis and Palestinians are used as pawns in the various machinations of the Phoenician Navy, the Palestinians drew the shortest straw by far.
